IDENTIFIERS *Kansas; *National Merit Scholars

ABSTRACT

This report contains two studies. The first study was conducted in order to obtain a profile of Kansas students in the 1999 class of National Merit Semifinalists (NMSFs). A survey was mailed to 166 students. Data were analyzed in terms of age, gender, race, language, family characteristics, high schools attended, extracurricular activities, leadership roles, part-time work, travel experiences outside the United States, high school programs, judgments concerning their schools, college/university preferences, and career plans. Results indicate that: (1) the majority of Kansas NMSFs are males, and almost all are Caucasian Americans; (2) NMSF parents are usually stable and well educated; (3) 19 percent of the state's high schools produce all of the NMSFs; (4) NMSFs report frequent participation in extracurricular nonsport activities and some participation in extracurricular sports and community-based activities; (5) 86.3 percent of respondents have held high school leadership positions; (6) more than half hold part-time jobs during the school year; (7) about 60 percent have traveled outside of the United States; (8) 79 percent of respondents reported taking accelerated or Advanced Placement courses; (9) over 83 percent assigned their schools a grade of A or B; (10) 60 percent listed Kansas colleges and universities among the 3 institutions they would like to attend; (11) 47 percent had not made a career choice; and (12) only 19 percent listed Kansas as the state in which they would prefer to spend their careers. A follow-up study was completed to determine the colleges and universities where 1999 NMSFs planned to enroll in the fall. Information provided by school officials indicated that more than 42 percent enrolled in Kansas institutions, and a majority chose public institutions. Appendixes contain statistical data supporting the studies and a copy of the survey questionnaire. (Contains 10 references.) (EV)

INTRODUCTION

Merit Scholarship Program

One hundred seventy-two Kansas high school students in the class of 1999 were named National Merit Semifinalists (NMSFs) for the 1999 Merit Program. These students from across the state achieved this distinction by performing at an exceptionally high level on the Preliminary Scholastic Aptitude Test/National Merit Semifinalist Qualifying Test (PSAT/NMSQT) as high school juniors during the fall semester of 1997. This group represents 0.6 of 1% of Kansas' 28,000 seniors.

In September 1998, 16,163 high school students were designated as NMSFs by the National Merit Scholarship Corporation (NMSC) from the 1,211,429 students who entered the 1999 Merit Program by taking the PSAT/NMSQT in October 1997. The number of NMSFs named in each state is proportional to its percentage of the national total of high school graduates (NMSC Annual Report 1997-1998). While the scores for all NMSFs are extremely high, qualifying scores vary from state-to-state. The qualifying scores for the 1999 Merit Program range from 201 to 222. The qualifying score is 212 for 1999 NMSFs from Kansas, Arizona, North Carolina, Tennessee, and Washington. Nineteen states and the District of Columbia had higher qualifying scores while 26 states had lower qualifying scores. The qualifying scores are higher than those for the 1993 Merit Program when scores ranged from 180 to 204, with Kansas at 195.

A NMSF must achieve Finalist status to be eligible for a Merit Scholarship, a goal achieved by 90% of the NMSFs. The requirements to advance to Finalist status include consistently high academic performance in grades 9 through 12, an SAT score that confirms the PSAT/NMSQT performance, a strong recommendation from the high school principal, and submission of a scholarship application which provides detailed biographical, academic, and other information concerning the student.

The NMSC, a privately financed, not-for-profit organization operating since 1955, offered 7,320 Merit Scholarships in the 1998 Merit Program. These Merit Scholarships are distributed from three categories:

1. National Merit \$2,000 Scholarships. These national awards are one-time, non-renewable scholarships that are distributed nationally using a representational formula similar to that applied to the NMSFs selection process. Every Finalist was considered for one of the 2,200 awards that were made in 1998.
2. Corporate-Sponsored Merit Scholarships. Three hundred twenty-four large and small companies, company foundations, and other business organizations sponsored 2,686 of these scholarships for Finalists who met criteria established by the sponsors. Most are reserved for children of sponsor organization employees. Some are one-time awards, but most are renewable for the undergraduate years. Scholarship awards range from \$1,000 to \$5,000 per year.

3. College-Sponsored Merit Scholarships. Two hundred two colleges and universities sponsored 4,073 awards in 1998. Two Kansas institutions offered a total of 74 awards as follows: Kansas State University-20 (\$6,500 freshman year and \$3,500 thereafter) and The University of Kansas-54 (\$5,000 annually). Finalists must attend the sponsoring institution to receive the award that can be renewable for up to four years of undergraduate study.

NMSC Merit Scholarships have grown from approximately 500 in 1955 to more than 7,320 in 1998. It is important to note that 7,320 represents slightly more than half (51%) of the 14,329 who qualified as Finalists. Consequently, 49% of the Finalists do not receive scholarships from NMSC. Some of these may receive financial assistance from university or college scholarships that have not been reserved specifically for National Merit Scholarships. However, it is likely that some Finalists receive no scholarships. (The NMSC has no specific data concerning the Finalists who do not receive NMSC Merit Scholarships).

A major benefit that all National Merit Scholars enjoy is access to highly selective universities, if they can afford to attend them. For example, in 1998, the following five universities enrolled 944 Merit Scholars even though none offers College-Sponsored Merit Scholarships: Harvard-370, Stanford-201, Yale-146, Princeton-124, and Massachusetts Institute of Technology-103. This has been an upward trend since 1991 when these same five schools attracted 739 Finalists. (Note: Some of these students may have received National Merit or Corporate-Sponsored Merit Scholarships.)

Other Studies of Kansas NMSFs

There have been three previous studies of Kansas NMSFs. *The Wichita Eagle-Beacon* obtained the names of the 1,926 Kansas high school students who were named NMSFs from 1970 through 1980, 1,359 of whom were located by the newspaper. In a series of articles appearing during February 1986, under the general title of "The Kansas Brain Drain," the *Eagle-Beacon* reported where the NMSFs went to college (63% did their undergraduate work in Kansas, but for those who went on for graduate studies, 62% left Kansas). The series focused specifically on those who left Kansas to pursue their careers (nearly 60%), contrasting their reasons with those who remained in the state.

The second study was conducted by Carolyn Rampey, a staff member with the Kansas Legislative Research Department. Rampey sent letters and questionnaires to the 159 Kansas students who were NMSFs in 1985. She received responses from 102 (64.1%), all but one of whom were planning to go to college the next fall. Only 42% of the students were going to attend Kansas schools, a 21% drop from the average percentage reported by the *Wichita Eagle-Beacon* for the years 1970 through 1980. A similar study one year later showed an increase to 46% attending Kansas schools.

A third study was conducted by the Jones Institute for Educational Excellence at The Teachers College, Emporia State University (ESU), during the academic year 1992-93. The study was conducted over a four month period from late October 1992 through March 1993. It involved five stages: (1) exploring/inquiring, (2) designing/defining, (3) implementing/surveying, (4) analyzing/synthesizing, and (5) writing/reviewing.

- Stage one: involved a literature search and contacts by telephone and/or letter with persons associated with the College Board, the Educational Testing Service, the National Merit Scholarship Corporation, and the Kansas State Department of Education. Also, an Emporia State University student who received a Merit Scholarship was interviewed during the exploratory process.
- Stage two: resulted in the questionnaire "Survey of High School Seniors Who Are National Merit Semifinalists" that was approved for distribution by the ESU Institutional Review Board for Treatment of Human Subjects.
- Stage three: was the mailing of the survey to the 169 Kansas NMSFs, addressed to each at his or her school. The initial mailing was on October 21, 1992. Two follow-up mailings occurred on November 18 and December 10, the last sent by certified mail. Surveys were completed anonymously except that each return envelope included a number to facilitate follow-up requests to those who had not responded. Also, the enrollment of the school that the student was attending was recorded on each returned survey to permit analyses based on school size.
- Stage four: involved the compilation of the data with selected disaggregations to allow gender and school size comparisons.
- Stage five: was the review of the investigator's draft report by other staff members in the Jones Institute for Educational Excellence.

Study Process

The current study is a replication of the 1993 Jones Institute for Educational Excellence study, and was conducted by staff at the Institute for Educational Research and Public Services at the School of Education, University of Kansas. The new study followed stages 2-5 of the original study (see Appendix K for survey instrument).

The initial mailing on November 6, 1998, was sent to 166 of the 172 NMSFs, addressed to each at his or her high school. The remaining six students could not be contacted through a high school because five received home schooling and one had left Kansas after taking the PSAT/NMSQT. A reminder postcard was sent on November 19, 1998, with a follow up letter sent on December 3, 1998. Follow up phone calls for all non-respondents were made to each student's high school counselor between December 14 and 18, 1998.

Statistical Overview

The following tables provide a statistical overview of the database that underlies this study.

Table 1. Kansas NMSFs by Sex and School Type						
	Total NMSF		All NMSF Public		All NMSF Private	
	Number	Percent	Number	Percent	Number	Percent
Female	76	45.8%	68	46.3%	8	42.1%
Male	90	54.2%	79	53.7%	11	57.9%
TOTAL	166	100.0%	147	100.0%	19	100.0%

Three more Kansas students were named NMSFs in 1999 than in 1993. However, as mentioned, data from only 166 of the 172 students named 1999 NMSFs are analyzed because five NMSFs received home schooling and one NMSF left Kansas prior to the senior year of high school.

Using data for the remaining 166 NMSFs and as shown in Table 4, the number of female students increased by 14 while male students decreased by 17 when compared to the 1993 NMSFs. Numbers of females attending public schools increased by 16 while numbers of females attending private schools decreased by 2 when compared with the 1993 NMSFs. Numbers of males attending public schools decreased by 11 and numbers of males attending private schools decreased by 6 when compared with the 1993 NMSFs.

Table 2. Completed Surveys Returned by Sex and School Type			Responding NMSF Public		Responding NMSF Private	
	Total Respondents	Percent	Total	Percent	Total	Percent
Female	50	52.6%	41	51.3%	7	58.3%
Male	45	47.4%	39	48.8%	5	41.7%
TOTAL	95	100.0%	80	100.0%	12	100.0%
Missing responses = 2 female and 1 male						

A total of 95 NMSFs responded for a response rate of 57.2%. This compares to a 1993 response rate of 66.9%. One more female responded to the current survey than in the 1993 survey while 19 fewer males replied. Numbers of female respondents attending public schools increased by one and the number attending private schools decreased by two. Numbers of male respondents attending public schools decreased by 14 while the number attending private schools decreased by six.

Table 3. Schools Attended by NMSFs and Schools Represented by Survey Responses				
	Number of Schools Attended by All NMSFs	Percent	Number of Schools where 1+ NMSF Responded	Percent of Total Schools
Public	60	83.3%	47	78.3%
Private	12	16.7%	8	66.7%
TOTAL	72	100.0%	55	76.4%

Completed surveys were received from 80 NMSFs attending 47 public schools. Completed surveys were received from 12 NMSFs enrolled in 8 private schools. Three respondents did not indicate type of high school.

The following table provides descriptors of the 1999 NMSFs contrasted with the same data for the 1993 NMSFs. Sixteen females were named NMSFs in 1999, while male NMSFs decreased by 17 from those in 1993. A greater percent of young women returned the survey in both 1999 and 1993 than young men.

Table 4. Comparison of 1999 and 1993 NMSFs					
1999	All NMSFs	Public NMSFs	Private NMSFs	Surveys Returned	Response Rate
Female	76	68	8	50	65.8%
Male	90	79	11	45	50.0%
TOTAL	166	147	19	95	57.2%
1993					
Female	62	52	10	49	79.0%
Male	107	90	17	64	59.8%
TOTAL	169	142	27	113	66.9%

PERSONAL CHARACTERISTICS

Age

Kansas law requires a child to be at least six years old by September 1 to enter the first grade. This means that the typical high school student will be seventeen years or older as of September 1 of his or her senior year and is likely to graduate at the age of seventeen or eighteen.

As of December 31, the average age for young women was 17 years 8 months old compared to young men whose average age was 17 years 10 months. The 95 respondent ages ranged from 16 years 10 months to 18 years 7 months. As of June 1999, eleven young women and nine young men will still be 17 years old while one young woman and one young man each will have turned 19. All other respondents will be 18 years old.

The Class of 1999 appears to be slightly older than the Class of 1993, whose ages ranged from 16 years 4 months to 18 years 5 months. Further, 2 young men and 2 young women were still 16 years old upon graduation in June 1993 while all of the students in the Class of 1999 will be at least 17 years old upon graduation in June 1999.

While the survey did not ask about double promotions in K-12, the age data suggest that few, if any, of the NMSFs skipped grades. As will be noted when discussing High School Programs later in this report, some NMSFs will have a head start in college by accumulating college credits while in high school.

Gender

In Kansas, more young women (56.8%) took the PSAT/NMSQT in October 1997 than did young men (see Appendix A). However, more young men (90) were named NMSFs in September 1998 than were young women (76).

Race

Survey respondents identified themselves as follows:

	1999 Respondents		1993 Respondents	
	Number	Percent	Number	Percent
White	87	93.5%	104	92.0%
Black	0	0.0%	0	0.0%
Asian	2	2.2%	7	6.2%
American Indian	0	0.0%	2	1.8%
Hispanic	2	2.2%	0	0.0%
Other	2	2.2%	0	0.0%
Total	93	100.0%	113	100.0%
N = 93; No Response = 2			N = 113	

According to the 1990 U.S. Census, racial distribution for the general population in Kansas was determined as follows:

Kansas 1990 U.S. Census	Total	Percent
White	2,233,897	88.5
Black	141,957	5.7
Asian & Pacific Islander	31,114	1.3
American Indian, Eskimo, Aleut	23,250	.9
Hispanic	90,289	3.6
	2,520,507	100.0

The serious under-representation of Blacks, American Indians, and Hispanics among the survey respondents continues to be a concern six years after surveying the 1993 Kansas NMSFs.

Language Fluency

In response to the question, "*Are you fluent in a language other than English?*," 9 young women and 3 young men answered "Yes". This is a reduction of three students from the 1993 study. Spanish was the only language reported by both sets of NMSFs students. The table below provides a comparison.

Table 5. Language Comparison		
Language	1999	1993
Spanish	6	7
French		4
German	2	1
Mandarin Chinese	1	
Modern Hebrew	1	
Norwegian	1	
Taiwanese	1	
Korean		1
Latin		1
Signing Exact English		1
Total	12	15
1999 N = 95; 1993 N = 113		

FAMILY CHARACTERISTICS

Parents

The biological parents of 98.4% of the respondents are both living. Two fathers are deceased. Further, 89% (81 pairs) of the biological parents are still married to one another, with only 11% (10 pairs) divorced. (Three students did not respond to this item.) These data are similar to those reported by the Class of 1993.

Parents' Occupations

The occupations of the mothers and fathers are summarized as follows:

Table 6. Occupations of Mothers and Fathers			
Mothers		Fathers	
Agriculture	1	Agriculture	7
Business	17	Business	20
Education	26	Education	11
Engineering	1	Engineering	8
Financial	3	Financial	1

Other	3	Other	1
Science	2	Science	3
Self Employed	1	Retired	1
Technology	1	Technology	8
No Response	3	No Response	3
	95		95

Parents' Educational Levels

The following table describes the highest levels of education that parents of NMSFs have completed.

Table 7. Parents' Highest Levels of Education				
Level of Education	Mothers		Fathers	
	Total	Percent	Total	Percent
Less than a high school diploma	0	0.0%	0	0.0%
High school graduate	4	4.2%	6	6.4%
College, but less than a degree	15	15.8%	7	7.4%
Associate (2 year) degree	2	2.1%	2	2.1%
Bachelor degree	41	43.2%	36	38.3%
Masters degree or higher	28	29.5%	25	26.6%

table continues

Table 7. Parents' Highest Levels of Education				
	Mothers		Fathers	
Other degrees:				
MD	2	2.1%	10	10.6%
JD	1	1.1%	3	3.2%
PhD	1	1.1%	4	4.3%
RN	1	1.1%	0	0.0%
Vocational Technical	0	0.0%	1	1.1%
TOTALS	95	100.0%	94	100.0%

All parents of the responding NMSFs completed high school. In 70 (73.7%) of the families, both parents received a bachelors or higher degree. In 35 (36.8%) of the families, the father attained a higher level of education; in 18 (18.9%), the mother; and in 40 (42.1%), both parents attained the same level of education.

Family Size, Siblings, and Birth Order

Two (2.0%) of the respondents have no siblings. Twenty-six NMSFs have brothers only, 32 have sisters only, and 35 have brothers and sisters. The table that follows shows the family sizes, frequencies, and birth order of the respondents.

Table 8. Family Size and Birth Order					
Number of			Birth Order		
Children	Families	Percent	Oldest	Middle	Youngest
1	2	2.1%	2	0	0
2	51	53.7%	33	0	18
3	18	18.9%	10	3	5
4	13	13.7%	6	3	4
5	4	4.2%	1	2	1
6	2	2.1%	1	1	0
7	2	2.1%	1	1	0
8	2	2.1%	2	0	0
12	1	1.1%	0	1	0

Sixty-nine of the respondents come from families that have two or three children. Among these 69, the NMSF is the older(est) in 43 cases. Overall, only children and first-borns represent approximately 60% of the survey respondents in 1993 and 1999.

Estimated Family Income

Estimated family incomes were reported by 91 of the 95 respondents as follows:

Table 9. Estimated Family Incomes for 1998-1999		
Income Range	Frequency	Percentage
Under \$29,999	7	7.7%
\$30,000-\$49,999	17	18.7%
\$50,000-\$69,999	24	26.3%
\$70,000-\$89,999	12	13.2%
\$90,000-\$109,999	13	14.3%
\$110,000 and over	18	19.8%

The three-year average (1995-1997) Kansas median income per household was \$33,919 (U.S. Bureau of the Census).

HIGH SCHOOLS ATTENDED

Public/Private

There are 355 public high schools in Kansas operated by 304 Unified School Districts. Sixty of these 355 schools, located within 46 of the 304 districts, enroll 147 of the 166 NMSFs. There are also 23 private/parochial high schools in Kansas; 12 enroll the 19 remaining NMSFs. Appendix B lists these 72 different schools and the numbers of NMSFs enrolled in each.

Size

Public high school enrollments range from 16 to 2,158 students. The following is based on Kansas' public high school enrollment data in Appendix C1, including the 60 schools that enroll the 147 of the 1999 Kansas NMSFs.

- The total enrollment of the 168 smallest public high schools in Kansas is less than 20,000 students. Seven of these schools had one NMSF each. So, 47% of all the schools enrolled less than 5% of all 1999 NMSFs.
- The next 90 smallest public high schools enrolled about 25,000 students. These 90 schools represent about 25% of all Kansas high schools. Seven of these schools also had one 1999 NMSF each.
- Therefore, nearly 75% of the public high schools (258) enrolled less than 10% of the 1999 NMSFs. These small schools had less than one-third of all student enrollments.
- In contrast, 13 schools had student bodies greater than 1,600 and produced 57 NMSFs, or nearly 40%, of the 1999 NMSFs from public high schools.

Therefore, some big schools enrolled rather large numbers of NMSFs. The percentage of NMSFs from large schools was about the same in 1999 (38.8%) as it was in 1993 (40.1%).

Private high school enrollments range from 30 to 1,160 students. The following is based on Kansas private high school enrollment data in Appendix C2, including 12 private high schools which enroll the remaining 19 NMSFs.

- Fifteen (about 65%) of the private high schools enrolled a total of less than 3,000 students; four of these schools had five NMSFs. This is about 26% of the total 1999 NMSFs attending private high schools.
- Four (about 17%) of the private high schools enrolled a total of about 3,600 students. These four schools produced seven NMSFs. This is about 37% of the total 1999 NMSFs attending private high schools.
- Four of the private high schools with unknown enrollments produced 37% (7) of the NMSFs attending private high schools.

Appendix D includes enrollments for each of the 72 schools (public and private) enrolling one or more NMSF.

Cost Per Student

The costs per student in all public school districts that include NMSFs are summarized in the following table:

Table 10. Per Student Costs in Public School Districts Enrolling NMSFs		
Costs	NMSFs	% of Total NMSFs
\$4000-4500	27	18.4%
4501-5000	65	44.2%
5001-5500	30	20.4%
5501-6000	17	11.6%
6001-6500	3	2.0%
6501-7000	1	0.7%
7001-7500	3	2.0%
9001-9500	1	0.7%
Source: Kansas State Department of Education. 1997-98 School Year Legal General Fund/LOB/Budget per Pupil, by Veryl Peter, School Finance, Topeka, Kansas: KSDE 1999.		

Most of the NMSFs are students in school districts that enroll young people who are *relatively* inexpensive to educate. That is, fewer "high cost" students enroll in those districts—students who are accommodated by the state school finance formula through weighting factors. These factors include sparsity, special needs, and socio-economic level. For example, a district would receive more money from the state to educate a student who is poor, has special needs, and is geographically isolated from the school than it would for a "normal" young person from a middle-class home located close to the school.

This does *not* imply that schools with fewer dollars do a better job and generate more NMSFs than those schools with more dollars. It also does *not* mean that school districts have an adequate resource base. Cost per student for each school district enrolling one or more 1999 NMSFs are presented in Appendix E.

Location

Twenty-eight high schools in five counties (Douglas, Johnson, McPherson, Sedgwick, and Shawnee) produced 60.8% of the NMSFs attending public schools. Four of these counties exceeds the state's average of 21.1% of adults over age 25 who have a bachelor's degree or higher. Douglas (37.7%) and Johnson (40.1%) are two of the three most highly educated of all counties, and together account for 36.7% of the NMSFs. Four additional counties produced four NMSFs each. Two of those counties were above the state's average of 21.1% of adults over age 25 who have a bachelor's degree or higher, and two below that average (see Appendix F for details). It is not surprising that schools that enroll large numbers of young people from homes with high levels of educational attainment have high-scoring students.

Nine counties representing 50% of the Kansas population age 25 and older produced 70% of the 1999 NMSFs. As shown in the following table, the three most populated counties among the nine represent 37.5% of the Kansas population and produced 50% of the 1999 NMSFs.

EXTRA-CURRICULAR ACTIVITIES

High School

This section summarizes responses of the 95 NMSFs who completed the 1999 survey. Attendance at a public or private high school was not considered when summarizing these data.

Academics

NMSFs participated frequently in extra-curricular, non-sport activities in high school. They averaged 4.61 activities per person. On average, young women participate in 5.06 activities, slightly more than young men at 4.11 activities. The next two tables detail these data.

Table 13. Participation in Extra-Curricular, Non-Sports Activities						
Activity	Female Respondents		Male respondents		Response Rate	
	Yes	Percent	Yes	Percent	Yes	Percent
School Paper	10	20.0%	7	15.6%	17	17.9%

7	5	10.0%	2	4.4%	7	7.4%
8	3	6.0%	3	6.7%	6	6.3%
9	2	4.0%	0	0.0%	2	2.1%
	50	100.0%	45	100.0%	95	100.0%
Compiled from survey responses of 95 NMSFs attending public/private high schools.						

Only one student did not participate in any extra-curricular, non-sports activity; two students participated in nine activities each.

Sports

NMSFs averaged 1.49 extra-curricular sports activities per respondent with young men more active (1.67) than young women (1.34). The trend was true for varsity sports (1.22 for young men and 1.04 for young women) and for intramurals (.44 for young men and .30 for young women). As shown below, young men preferred the varsity sports of track, cross country, and football. Young women prefer the varsity sports of track, volleyball, cross country, and basketball.

Table 15. Participation in Extra-Curricular Sports Activities

Compiled from survey responses of 95 NMSFs attending public/private high schools.						

Only one in four (24.2%) of the young people did not participate in sports.

Community

Most NMSFs (85.3%) participate in community-based activities, averaging 1.36 activities per person. Both young men and women participated at about the same rate. Nearly 6 in 10 were active in religious youth groups. The following tables detail the nature and frequency of 1999 NMSFs community involvement.

Table 17. Participation in Community-Based Extra-Curricular Activities						
	Female Respondents		Male respondents		Total	
Activity	Yes	Percent	Yes	Percent	Yes	Percent
4-H	4	8.0%	2	4.4%	6	6.3%

5	2	4.0%	0	0.0%	2	2.1%
	50	100.0%	45	100.0%	95	100.0%

Fifteen participated in no community-based activities.

LEADERSHIP ROLES

The following data have been summarized based on the responses of the 95 NMSFs who completed the survey. Attendance at a public or private high school was not considered when summarizing these data.

Most NMSFs (86.3%) have or have had leadership roles. Young women are more active in leadership than young men (3:2 ratio). The following tables detail the nature and frequency of 1999 NMSFs community involvement.

Table 19. Types of Leadership Roles NMSFs Held in High School

7	1	2.0%	1	2.2%	2	2.1%
	50	100.0%	45	100.0%	95	100.0%

NMSFs provide leadership within a wide variety of activities and organizations in their high schools and communities. Most (60%) held two or more such positions. A higher percentage of young men (16.8%) than young women (10.0%) report no leadership roles.

PART-TIME WORK

Slightly more than half (52.6%) of the 1999 NMSFs held part-time jobs during the school year. The percent is slightly higher for young men (55.6%) than for young women (50%). During their junior year, young women averaged 9.1 work hours per week; young men averaged 8.1. Average work hours increased to 10.6 for young women during their senior year and to 9.2 for young men. In the summer months, two of three students worked, up from one in two during the year.

NMSFs worked in a wide range of jobs including camp counselors, cashiers, cinema staff, clerks, child care providers, customer service representatives, fast food and restaurant staff, farmhands, life guards, maintenance personnel, musicians, production workers, sports officiators, and tutors/teachers. Some NMSFs held rather unique positions; examples include baker, dietary aide, graphic designer, webmaster, pharmaceutical lab assistant, and physics research assistant. The most frequently held jobs were in food service, tutoring, and child care. NMSFs held

a number of academic jobs. These include seven tutors (chemistry, trigonometry, mathematics, French, and Hebrew), five teachers (piano, viola, swimming, and shooting), a computer laboratory assistant, and a physics research assistant.

TRAVEL EXPERIENCES OUTSIDE THE UNITED STATES

Approximately 60% (57) of the respondents noted that they had traveled outside the United States. Of these, 35 had traveled to Mexico and/or Canada, 28 to one or more European countries, and 15 to countries in the Caribbean, South America, Australia, and Asia. More young women (33) have traveled outside the United States than young men (24). Further, more young women (25) have traveled beyond Mexico or Canada than young men (13).

HIGH SCHOOL PROGRAMS

Accelerated/Advanced Placement Programs

This section provides data gathered in response to the following questions:

Does your high school offer accelerated or advanced placement courses? Yes/No

If "Yes," how many?

If "Yes," list those you will have completed by the time you graduate.

Advanced placement courses represent a specific and copyrighted pattern of instruction, while accelerated courses are less well defined and may take many forms. For example, some students describe regular courses as "honors" courses if students complete additional assignments. In other words, the term "accelerated" is probably subject to a variety of interpretations and might result in inconsistencies in responses.

Eighty (84.2%) of the 95 respondents indicated that accelerated or advanced placement courses were available in their schools. Fifteen (15.8%) students reported that these courses are not offered in their schools.

Take courses, but do not know how many available	26

Of the 80 students reporting that their schools offered accelerated or advanced placement courses, five indicated that they did not take any of these courses. The number reported taken by students' ranges from one course to 17. Thirteen students reported enrolling in ten or more of these courses. Young women averaged 5.8 courses while young men averaged 6.1. The following table summarizes these data.

College Credits

This section gathers data from the question:

Does your high school provide opportunities to take college courses taught by college or university instructors?

Of the 95 respondents, 66 responded affirmatively. Fifty-six of those respondents indicated that they had taken such classes. These 56 respondents reported that they will have earned 2-48 college credit hours by the time they graduate from high school. Nine of the respondents will

have completed the equivalent of at least their college freshman year by the time they graduate from high school (see shaded area of table below). It is important to remember that these totals may represent advanced placement courses as well as college courses taught by community college or university instructors.

Table 23. College Credits Earned While in High School

Foreign Language Studies

All 95 respondents indicated that they had studied a foreign language while in high school. Twenty-two students reported studying two languages and three students reported studying three. The languages that the respondents studied are provided in the following table:

Table 24. Foreign Languages Studies			
	Female	Male	Total

	50	45	95
N = 50 females and 45 males			

Forty students studied a foreign language for four or more years, 23 students for three years, 29 students for two years and 3 students for one year. These students appear to have diverse interests as demonstrated by their broad selection of foreign languages.

Grade Point Averages

Many schools use weighted grading formulae. This makes GPA comparisons difficult, if not impossible. The overall GPA was 4.05 on a 4.0 scale. Six students reported GPAs of less than 3.75; two of these had less than 3.0.

JUDGMENTS CONCERNING SCHOOLS

School Evaluations

The following survey question, adapted from the previous NMSF study, solicited students' evaluations about the schools they had attended:

Students are often given the grades A, B, C, D and F to denote the quality of their work. Suppose the schools that you have attended were graded in the same way. What grade would you give (check one for each school level)?

<i>Elementary</i>	<input type="checkbox"/> A	<input type="checkbox"/> B	<input type="checkbox"/> C	<input type="checkbox"/> D	<input type="checkbox"/> F
<i>Middle/Junior High School</i>	<input type="checkbox"/> A	<input type="checkbox"/> B	<input type="checkbox"/> C	<input type="checkbox"/> D	<input type="checkbox"/> F
<i>High School</i>	<input type="checkbox"/> A	<input type="checkbox"/> B	<input type="checkbox"/> C	<input type="checkbox"/> D	<input type="checkbox"/> F

The table that follows reports the grades assigned to elementary, middle, and high schools separately. Scores are categorized by public and private schools.

Table 25. Grades Given Public & Private Schools by NMSFs						
	Public		Private		Total	
	Response	Percent	Response	Percent	Response	Percent
Elementary						
A	50	60.2%	11	91.7%	61	64.2%
B	27	32.5%	1	8.3%	28	29.5%
C	6	7.2%	0	0.0%	6	6.3%
D	0	0.0%	0	0.0%	0	0.0%
F	0	0.0%	0	0.0%	0	0.0%
Totals	83	100.0%	12	100.0%	95	100.0%
Middle						
A	18	21.7%	11	91.7%	29	30.5%
B	31	37.3%	1	8.3%	32	33.7%
C	25	30.1%	0	0.0%	25	26.3%
D	8	9.6%	0	0.0%	8	8.4%
F	1	1.2%	0	0.0%	1	1.1%
Totals	83	100.0%	12	100.0%	95	100.0%
High School						
A	46	55.4%	10	83.3%	56	58.9%
B	28	33.7%	2	16.7%	30	31.6%
C	6	7.2%	0	0.0%	6	6.3%
D	3	3.6%	0	0.0%	3	3.2%
F	0	0.0%	0	0.0%	0	0.0%
Totals	83	100.0%	12	100.0%	95	100.0%
Summary of all Ratings						
A	114	45.8%	32	88.9%	146	51.2%
B	86	34.5%	4	11.1%	90	31.6%
C	37	14.9%	0	0.0%	37	13.0%
D	11	4.4%	0	0.0%	11	3.9%
F	1	0.4%	0	0.0%	1	0.4%
Totals	249	100.0%	36	100.0%	285	100.0%

The grades show that NMSFs believe that their schools are doing well. Over 83% gave their schools As or Bs. Elementary schools got the highest grades, then high schools and middle schools. Even in the lowest ranked category—public middle schools—nearly 60% received As or Bs.

Teacher Evaluations

A similar survey question was asked about teachers with NMSFs responding to the following question:

Using the same scale again, what percent of teachers whom you have had at the various school levels would you give As, Bs, Cs, Ds, and Fs?

Elementary Schools %___A %___B %___C %___D %___F = 100%

Middle/Junior High School %___A %___B %___C %___D %___F = 100%

High School %___A %___B %___C %___D %___F = 100%

The following table includes the percentages of teachers in elementary, middle, and high schools that respondents believed deserved the designated grade. These data are reported by public and private schools. The percentages indicate that NMSFs view their elementary teachers as the best, with grades for middle school teachers more nearly average. The grades for high school teachers are better than middle school counterparts, but not up to the level of the elementary teachers. The percentages also indicate that NMSFs who attend private schools grade their teachers higher than those NMSFs who attend public schools.

Table 26. Grades Given Public & Private School Teachers by NMSFs						
	Public			Private		
Grade	Elementary	Middle	High School	Elementary	Middle	High School
A	60.2%	37.9%	55.1%	80.4%	68.7%	72.0%
B	24.5%	32.4%	25.7%	13.3%	16.2%	12.1%
C	11.4%	21.2%	12.4%	3.3%	11.7%	13.8%
D	3.6%	7.1%	4.3%	2.9%	2.1%	1.2%
F	0.3%	1.4%	2.5%	0.1%	1.3%	0.9%
	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%
Private schools = 12 respondents; Public schools = 80 respondents; No response = 3						

NMSFs graded their elementary teachers highest, followed by high school then middle school teachers. It is important to note, however, that even with the lowest rated group of teachers (public middle school teachers), two of three (70.3%) received As or Bs.

Table 27. Above Average and Superior Grades Given to Public & Private School Teachers by NMSFs									
Grade	Public			Private			Total		
	Elem	Mid	HS	Elem	Mid	HS	Elem	Mid	HS
A	60.2%	37.9%	55.1%	80.4%	68.7%	72.0%	70.3%	53.3%	63.6%
B	24.5%	32.4%	25.7%	13.3%	16.2%	12.1%	18.9%	24.3%	18.9%
	84.7%	70.3%	80.8%	93.7%	84.9%	84.1%	89.2%	77.6%	82.5%
Private schools = 12 respondents; Public schools = 80 respondents; No response = 3									

Academic Rigor

Students' education is affected by numerous factors including the school, the teachers, and academic rigor. The following question was posed to assess academic rigor at all levels of K-12 education:

As you reflect on your school experiences, how would you judge the academic rigor of your program?

Fifty-seven of the respondents indicated that their academic programs should be less rigorous. Elementary and high school programs were judged as too rigorous while middle school programs were judged not rigorous enough. The summarized responses on academic rigor is included in Appendix G.

Longer School Year

The following survey question asked NMSFs about extending the school year:

In some nations, students attend school as many as 240 days a year as compared to about 180 days in the United States. How would you feel about extending the school year by 30 days, making the school year about 210 days or 10 months?

The responses to the survey are summarized as follows:

Table 28. Responses to Extending the School Year						
	Female		Male		Total	
	Number	Percent	Number	Percent	Number	Percent
Favor	14	28.0%	6	13.3%	20	21.1%
Oppose	22	44.0%	34	75.6%	56	58.9%
Uncertain	14	28.0%	5	11.1%	19	20.0%
Totals	50	100.0%	45	100.0%	95	100.0%
N = 50 females and 45 males						

Fifty-six of the 95 respondents opposed lengthening the school year. Young men tended to be more strongly opposed than young women. Two students chose to explain why they were uncertain: "It really depends on what we do with the time." "Depending on how breaks are done—should not be all at one time."

High School Academic/Non-Academic Facilities

NMSFs were asked to rate academic and non-academic facilities available for student use in their high schools. The following table reports the percentages of the responses to each of 15 different items.

Table 29. Quality of Facilities and Equipment Available for Student Use					
	Excellent	Good	Fair	Poor	Not Applicable/ Available
Academic Facilities					
Library	14.7%	49.5%	26.3%	9.5%	0.0%
Science Laboratory(ies)	12.6%	45.3%	32.6%	6.3%	3.2%
Classrooms	11.6%	57.9%	27.4%	3.2%	0.0%
Band/Orchestra Room	12.6%	29.5%	26.3%	5.3%	26.3%
Choral Room	11.6%	25.3%	17.9%	2.1%	43.2%
Auditorium/Theater	26.3%	42.1%	10.5%	9.5%	11.6%
Vocational Laboratories/Classrooms	7.4%	20.0%	9.5%	2.1%	61.1%
Computers	29.5%	35.8%	25.3%	6.3%	3.2%
TOTAL AVERAGE OF PERCENTS	15.8%	38.2%	22.0%	5.5%	18.6%
Non-Academic Facilities					
Gymnasium	34.7%	49.5%	9.5%	3.2%	3.2%
Swimming Pool	8.4%	23.2%	5.3%	6.3%	56.8%
Football Field	16.8%	22.1%	10.5%	9.5%	41.1%
Baseball Field	10.5%	13.7%	10.5%	4.2%	61.1%
Soccer Field	5.3%	14.7%	8.4%	5.3%	66.3%
Track Field	17.9%	33.7%	10.5%	10.5%	27.4%
Tennis Courts	8.4%	24.2%	16.8%	6.3%	44.2%
TOTAL AVERAGE OF PERCENTS	14.6%	25.9%	10.2%	6.5%	42.9%
N = 95 attending 55 public & private schools					

Libraries, science labs, classrooms, auditoriums, and computers were judged to be excellent or good by more than half of the respondents. The table below provides a ranking for the 15 items based upon the percentage ratings at the excellent and good levels given by the 95 respondents.

Table 30. Ranking of Facilities Based on a Total of the Excellent and Good Ratings	
Gymnasium	84.2%
Classrooms	69.5%
Auditorium/Theater	68.4%
Computers	65.3%
Library	64.2%
Science Laboratory(ies)	57.9%
Track Field	51.6%
Band/Orchestra Room	42.1%
Football Field	38.9%
Choral Room	36.8%
Tennis Courts	32.6%
Swimming Pool	31.6%
Vocational Laboratories/Classrooms	27.4%
Baseball Field	24.2%
Soccer Field	20.0%

In an effort to determine if school size is related to these judgments, the data were disaggregated to compare respondents evaluations based on three school enrollment sizes: 18 schools enrolling up to 400 students, 29 schools enrolling 401 to 1,599 students, and 8 schools enrolling 1,600 or more students. The results of the disaggregation can be found in Appendix H.

A review of the total percentages for the eight academic facilities reveals little difference between the ratings for the three size groups. Further, the total percentages confirmed the overall response that libraries, science labs, classrooms, auditoriums, and computers were judged excellent or good by more than half of the respondents regardless of the population of the school that they attended. The contrast between the three size groups was greater for the seven non-academic facilities. Only 37% of the NMSFs from small schools and 37.8% of those from medium-sized schools thought these facilities were excellent or good. Nearly half (48.6%) of those from large schools rated these facilities excellent or good.

Public School Challenges

The following question, taken from the 1998 Gallup/Phi Delta Kappa Poll, was asked:

What do you think are the biggest problems that the schools in your community face?

The most frequently cited problem in the Gallup/Phi Delta Kappa Poll was “fighting/violence/gangs” listed by 15% of the respondents. The next three in order of frequency were “Lack of discipline” (14%), “Lack of financial support/funding/money” (12%), and “Use of drugs/dope” (10%). These issues continue as challenges for Kansas schools according to the 1999 NMSFs respondents, but not at the same levels indicated in the Gallup/Phi Delta Kappa Poll.

The 95 respondents offered 111 answers to this question. A perceived lack of funding (24.3%) was the most frequent response, followed by student apathy (18%). Both concerns have increased in importance since the 1993 survey. The following table provides the categorization of responses and the frequency of citation.

Table 31. Public School Challenges as Perceived by NMSFs		
Category	Frequency	Percent
Finance/Overcrowding		
• Funding	27	24.3%
• Technology and facilities	3	2.7%
• Overcrowding	3	2.7%
Students		
• Student apathy	20	18.0%
• Drugs, tobacco and/or alcohol use and abuse	9	8.1%
• Violence	5	4.5%
Community/Family Involvement	5	4.5%
Curriculum/Grouping	4	3.6%
Inadequate Teachers	4	3.6%
Standards	6	5.4%
Administration	2	1.8%
Values	2	1.8%
Various other items	21	18.9%
TOTAL	111	100%

Public School Improvements

Ninety-one of the 95 students responded to the following question:

If you were allowed to make only one recommendation for improving the schools, what would that recommendation be?

The table below lists the categories for the recommendations made and the frequency for each.

Table 32. Recommendations for Improving Schools		
	Responses	Percent
Academics and Curriculum	34	37.3%
Facilities and Equipment	17	18.7%
Teachers' Salaries & Working Conditions	9	9.9%
Organizational Changes	9	9.9%
Discipline	4	4.4%
Athletics	2	2.2%
Other	16	17.6%
Total Responses	91	100.0%

Interestingly, respondents made the most suggestions for improving schools in the area of academics and curriculum. This may point to an inconsistency in the results. Earlier, the

NMSFs reported that academics were too rigorous at the high school level. This difference needs more research to determine the specific reasons for this inconsistency. All recommendations submitted by the 95 respondents to the survey are included in Appendix I.

COLLEGE & UNIVERSITY CHOICE

Preferred Institutions

Fifty-seven of the 95 respondents listed Kansas colleges and universities among the institutions they would like to attend. Young men (30) expressed slightly more interest in Kansas institutions than did young women (27). The choices listed by the 1999 respondents are reported in the following table. Some students listed more than one Kansas institution. Thirty-eight of the 1999 NMSF respondents did not list any Kansas institutions among the colleges or universities they would like to attend.

Table 33. Preferred Kansas Colleges/Universities									
	1 st Choice		2 nd Choice		3 rd Choice		Total		Grand Total
	F	M	F	M	F	M	F	M	
A Kansas institution	0	0	0	1	0	0	0	1	1
University of Kansas	8	11	5	6	8	4	21	21	42
Wichita State University	0	1	0	1	0	1	0	3	3
Kansas State University	5	6	3	4	4	3	12	13	25

Reasons Underlying First Choice

Students were asked to review a list of 13 reasons for preferring an institution and to check all that applied to their first choice of a college or university. The results are shown in the following table:

Table 35. Reasons Underlying First Choice of College/University

Reason	Female		Male		Total	
	Number	Percent	Number	Percent	Number	Percent
Good academic reputation	48	96.0%	45	100.0%	93	97.9%
Size	37	74.0%	26	57.8%	63	66.3%
Promise of financial aid or scholarship	29	58.0%	33	73.3%	62	65.3%
Graduates get good jobs	30	60.0%	27	60.0%	57	60.0%
Graduates go to top graduate schools	25	50.0%	18	40.0%	43	45.3%
Near home	17	34.0%	17	37.8%	34	35.8%
Good social life reputation	12	24.0%	21	46.7%	33	34.7%
Low tuition	14	28.0%	14	31.1%	28	29.5%
Guidance counselors' advice	15	30.0%	8	17.8%	23	24.2%
Relatives' wishes	13	26.0%	8	17.8%	21	22.1%
Teachers' advice	10	20.0%	8	17.8%	18	18.9%
Friends' suggestions	11	22.0%	7	15.6%	18	18.9%
Reputation in sports	6	12.0%	12	26.7%	18	18.9%
Religious affiliation	3	6.0%	6	13.3%	9	9.5%
Other	13	26.0%	10	22.2%	23	24.2%

Comments provided in the category "Other" included "not too close to home," "am currently attending," "diverse, relaxed and the students loved the school," "honor system," familiarity with faculty and campus," "desired program of study," "big honors program," "good vibes," "relatives currently attending school," "good music," "excellent instructors," "varsity swimming," "good research facilities and opportunities," "diversity of student body," "computer arts availability," "marching band large," and "skiing and fishing."

Over 90% of the 1999 respondents reported that "good academic reputation" was the number one reason underlying first choice of a college or university. The next 3 reasons were "size," "promise of financial aid/scholarship," and "graduates get good jobs." Reasons underlying first choice of a college or university differed between the genders.

Factors Determining Actual Choice

In addition to identifying the reasons underlying first choices of a college or university, NMSFs were asked to list the factors *that will determine* the college or university they actually attend. As the following table indicates, financial considerations become dominant, listed by more than three out of four of the NMSFs.

Table 36. Factor Determining Actual Choices of Colleges/Universities						
Factor Description	Female		Male		Total	
	Count	Percent	Count	Percent	Count	Percent
Financial						
Aid/Scholarships	26		23		49	
Cost/ Affordability	6		9		15	
Money	<u>2</u>		<u>4</u>		<u>6</u>	
	34	68.0%	36	80.0%	70	73.7%
Acceptance/Admission	15	30.0%	8	17.8%	23	24.2%
Academic Reputation	10	20.0%	8	17.8%	18	18.9%
Location						
Location	3		4		7	
Distance from Home	<u>4</u>		<u>4</u>		<u>8</u>	
	7	14.0%	8	17.8%	15	15.8%
Program Availability	12	24.0%	5	11.1%	17	17.9%
Size	2	4.0%	2	4.4%	4	4.2%
Campus 'Feel'/Atmosphere	4	8.0%	6	13.3%	10	10.5%
Other						
Campus Visit	4	8.0%	0		4	4.2%
Desire to Attend There	2	4.0%	2	4.4%	4	4.2%
Parents' Desire	2	4.0%	1	2.2%	3	3.2%
Sports	0		3	6.7%	3	3.2%
Extra-Curricular/Research Opportunities	1	2.0%	2	4.4%	3	3.2%
Faculty Involvement	1	2.0%	1	2.2%	2	2.1%
College Interest in Candidate	2	4.0%	0		2	2.1%
Graduate Job Placement	1	2.0%	1	2.2%	2	2.1%
Need to Leave Home	1	2.0%	0		1	1.1%
Unknown	0		2	4.4%	2	2.1%
Other	2	4.0%	1	2.2%	3	3.2%

The above factors determining actual choice of a college or a university are comparable to the responses of the 1993 NMSFs.

CAREER PLANS

Career Preferences

The results reported in this section are provided with a note of caution. Well over half of all college students change their majors at least once (Astin, 1977). Given that the respondents are high school seniors, they were asked to respond to the following question:

Have you made a career choice?

Fifty of 1999 NMSFs respondents said "Yes" and 45 said "No." More young men (27) than young women (23) responded "Yes." However, when asked about the certainty of their career choice, young women were more certain than young men.

Table 37. Level of Certainty of Career Choices						
	Female		Male		Total	
Certainty Level	Number	Percent	Number	Percent	Number	Percent
1 (very certain)	3	13.0%	1	3.7%	4	8.0%
2	14	60.9%	11	40.7%	25	50.0%
3	4	17.4%	8	29.6%	12	24.0%
4	1	4.3%	4	14.8%	5	10.0%
5 (very uncertain)	1	4.3%	3	11.1%	4	8.0%

The career preferences of the 50 students who listed choices are in Appendix J. Young women chose careers in science-related fields more frequently than young men, as summarized below. However, young men continue to choose engineering as a career slightly more often than young women when compared to the 1993 NMSF Survey.

	Female	Male
Engineering	21.7%	25.9%
Health and Medical Science	30.4%	11.1%
Science and Mathematics	8.7%	7.4%
	60.9%	44.4%

Young men more frequently selected careers in the fields listed in the table below. Over 4% of the young women indicated a choice of business-related careers where none chose this option during the 1993 NMSF Survey. Further, only young men listed careers in humanities and social sciences in the 1999 study, while both young men and young women noted an interest in these fields in the earlier study.

	Female	Male
Business	4.3%	14.8%
Humanities and Social Sciences	0.0%	11.1%
Fine and Applied Arts	8.7%	11.1%
Education	4.3%	7.4%
	39.0%	70.3%

Work Location Preference

The following table summarizes the responses to the question:

After you graduate from college, where (which state) would you most prefer to work?

Table 38. Preferred States for Employment			
	Females	Males	Total
Kansas	8	10	18
New York	3	3	6
Illinois	2	3	5
California	2	2	4
Florida	1	2	3
Massachusetts	3	0	3
North Carolina	2	1	3
Washington	1	2	3
Minnesota	1	1	2
Arizona	1	0	1
Colorado	1	0	1
Iowa	0	1	1
Maine	1	0	1
Montana	1	0	1
South Dakota	1	0	1
Texas	0	1	1
Midwest	0	2	2
West Coast	0	1	1
Warm State	0	1	1
British Columbia, Canada	0	1	1
Norway	0	1	1
No Preference/Not Important	1	1	2
Unknown	19	11	30
Where I go to college	1	0	1
Total Responses	49	44	93
N=87 (48 females & 39 males); some respondents indicated more than one choice			

Less than one out of five (18.9%) of the respondents listed Kansas as the state in which they would prefer to work. An additional 33.7% of the respondents reported that they were uncertain, had no preference, or believed that the state in which they work was not important.

SUMMARY

Ninety-five of 166 Kansas seniors named 1999 NMSFs responded to the survey during the fall of 1998. Fifty of those respondents were young women and 45 were young men. The 95 respondents attended 47 public high schools located in 40 school districts, and 8 private high schools. The following general characteristics of the 1999 Kansas NMSFs result from the compilation of their collective responses.

Personal Characteristics. The NMSFs graduating in May 1999 already are or soon will be 18 years of age. Young women and men are almost equally represented. Most of these students are white. One of every 8 students is fluent in a language other than English. Approximately half of these students will have traveled outside of the U.S. at least once prior to graduation from high school.

Family Characteristics. The 1999 NMSFs are members of educated, nuclear families. Their parents have high school diplomas and most have bachelor's degrees. Further, the NMSFs live with both parents and, in most cases, at least one sibling. Estimated family incomes for most NMSFs are well above the Kansas per capita income.

High Schools Attended. The majority of the 1999 NMSFs attended Kansas public high schools. Also, more of these students attend high schools with large enrollments in urban areas than smaller schools in rural areas. Enrollment of NMSFs in private high schools remained similar to the 1993 level. However, five Kansas students receiving home schooling were named 1999 NMSFs.

Academic Activities. NMSFs rate their teachers highly and indicate that their academic programs are rigorous. Most NMSFs participate in advanced or accelerated classes during high school. Some of these students will begin their post-secondary education with college credits equivalent to the completion of their freshman year of school.

Extra-Curricular Activities. NMSFs are equally active outside of the classroom, developing technical and interpersonal communication skills. Activities range from writing for the student newspaper and organizing student clubs; developing appreciation for or talent in the arts; developing fitness and skill in sports such as track, basketball, and volleyball; to giving back to their community through service. Development of leadership skills is the common thread that connects all of these activities. These NMSFs average over five activities per person. Furthermore, over half of these students hold part-time employment during the school year, and one in two hold employment during the summer months.

College & Career Plans. Slightly more than half of the highly talented Kansas NMSFs include consideration of a Kansas institution among their top three choices of a college or university. They indicated that their final choice will be based on four factors: 1) good academic reputation, 2) size, 3) financial aid or scholarship assistance, and 4) graduates get good jobs. Over half of the NMSFs will have decided upon a career choice when they begin college. However, less than one out of five indicated Kansas as the state in which they would prefer to work upon graduation.

The 1999 Kansas NMSFs represent a well-educated, family-oriented, highly active group of young people. Their development as leaders is demonstrated by their recommendations on improving schools (see Appendix I). Their families have provided them with strong foundations and educational opportunities. Our job as educators is to extend those opportunities through talented teachers and excellent facilities at both K-12 and post-secondary education levels.

APPENDIX I

1999 NMSFs Recommendations for Improving Schools

Academics and Curriculum Changes

- be sure that students understand material before moving on
- inspire students to excel by setting higher standards and making more challenging courses available
- more programs to reduce the drinking level
- more attention to advanced and gifted students
- fund the arts!!
- maybe a larger variety of courses
- make classes harder so that students have to exert more effort (avoid laziness)
- provide challenging courses for the gifted program
- read better books
- honors classes for foreign languages before the fifth year
- offer more advanced classes
- more emphasis on math and on application problems
- provide accelerated social science classes
- teach students to write early on
- more creative teaching styles; less lecture and more application of knowledge
- better techniques for teaching special-Ed students so that the gifted and handicapped are fully motivated
- don't teach: experience
- redesign the curriculum
- too much repetition of subject matter - I didn't feel challenged until my junior year
- try to be more rigorous so the USA can keep up with other countries; especially in foreign languages (start earlier)
- dump the SAGE program - it's useless; have more advanced classes instead
- provide increased technical literacy and job training
- stronger science department
- add harder classes
- more attention for high-end kids
- better extracurricular programs for middle school
- teachers should use class time more effectively
- have a more unified English department in grade school to better teach fundamentals
- more resources for top students, i.e., more AP classes
- more funding for the fine arts
- improve the elementary & mid-school science program
- provide for higher ability groups; don't put everyone together and pay more attention to the less intelligent
- less grade inflation

APPENDIX I (cont.)

1999 NMSFs Recommendations for Improving Schools

Facilities and Equipment

- newer sports facilities
- renovate facilities
- better technology
- replace the many outdated computers with a few up-to-date ones
- add more windows
- more computer/internet access
- improve the science labs & facilities
- more and better computer access for students
- keep technology (computers) available to all students
- improving educational facilities & resources
- better physics department
- give each school an additional 7 million for renovation & reduction of class size

Teachers' Salaries & Working Conditions

- increase pay for teachers
- hire more teachers
- pay teachers more to attract scholarly people to be teachers
- pay teachers more - higher quality teachers
- hire better teachers; fire poor ones
- use funding intelligently to improve facilities and teachers' salaries
- increase teacher salary to attract quality teachers
- better teachers
- increase teacher salary
- hire more teachers who majored in the subject they are to teach

Organizational Changes

- allow reduced schedules for seniors
- make lunch longer
- improved bus services, including zero hour & activities busses
- more separation into advanced classes
- get rid of block scheduling!!
- no more block scheduling
- co-educational
- reduce class sizes in larger schools
- improve student-to-teacher ratio

Discipline

- faculty should focus on the bigger problems, not on whether one is chewing gum
- that the majority of students not be punished for the actions of a few
- stricter disciplinary policies & enforcement
- administration should enforce the existing rules rather than make new ones

APPENDIX I (cont.)

1999 NMSFs Recommendations for Improving Schools

Athletics

- de-emphasize sports
- more emphasis on arts & less on sports

Other

- having a more open-minded attitude
- continue striving for improvement in all areas
- school paper
- more focus on stretching oneself
- more participation from students
- less infringement on human rights
- recognition of other states' accelerated students
- equal treatment/funding for all programs
- get more students involved in activities like volunteering
- allow for prayer, discussion of religious personal values
- increased parental involvement
- reinstate the idea of absolute moral standards
- better fundraising techniques and better policing of those funds
- improve administration (2 responses)

<input type="checkbox"/> Debate	<input type="checkbox"/> Band	<input type="checkbox"/> Orchestra
<input type="checkbox"/> Choral Group	<input type="checkbox"/> Honor Society(ies)	<input type="checkbox"/> Service Organization(s)

Sports: (Mark "I" for Intramural and "V" for Varsity)

<input type="checkbox"/> Basketball	<input type="checkbox"/> Football	<input type="checkbox"/> Baseball
<input type="checkbox"/> Soccer	<input type="checkbox"/> Volleyball	<input type="checkbox"/> Track
<input type="checkbox"/> Tennis	<input type="checkbox"/> Golf	<input type="checkbox"/> Cross Country
<input type="checkbox"/> Swimming	<input type="checkbox"/> Gymnastics	<input type="checkbox"/> Wrestling

Other (please list) _____

2. Extra-curricular activities in the community. Check all of those in which you participated during your high school years.

☐ 4-H
☐ Boy or Girl Scouts
☐ Youth groups associated with a religious organization
☐ Community based sports programs

Other (please list) _____

3. Leadership positions in high school (for example, editor, team captain, student government president, etc.).

4. Does your high school offer accelerated or advanced placement courses? ☐ Yes ☐ No

If "Yes," how many? _____

If "Yes," list those you will have completed by the time you graduate.

5. Does your high school provide opportunities to take college courses taught by college or university instructors?

☐ Yes ☐ No

If "Yes," how many? _____

If "Yes," list those you will have completed by the time you graduate.

6. Will you have earned some college credits by the time you graduate from high school?

☐ Yes ☐ No

If "Yes," how many semester hours? _____

7. Did you work for pay during the school year?

☐ Yes ☐ No

If "Yes," how many hours per week during your junior year? _____

Hours during this year? _____

If "Yes," briefly describe the nature of your work.

8. Did you work for pay during this past summer?

☐ Yes ☐ No

If "Yes," briefly describe the nature of your work.

**Survey of 1999 Kansas High School Seniors
Who are National Merit Semifinalists
Page 2 of 4**

9. Current cumulative high school grade point average (GPA): _____
10. Have you traveled outside the United States? _____ Yes _____ No
If "Yes," to what country(ies) have you traveled?

11. Are you fluent in a language other than English? _____ Yes _____ No
If "Yes," which one(s): _____
12. Have you studied a foreign language while in high school? _____ Yes _____ No
If "Yes," which one(s): _____
If "Yes," for how many years: _____
13. Students are often given the grades A, B, C, D and F to denote the quality of their work. Suppose the schools that you have attended were graded in the same way. What grade would you give (check one for each school level)?
- | | | | | | | | | | | |
|---------------------------|-------|---|-------|---|-------|---|-------|---|-------|---|
| Elementary School | _____ | A | _____ | B | _____ | C | _____ | D | _____ | F |
| Middle/Junior High School | _____ | A | _____ | B | _____ | C | _____ | D | _____ | F |
| High School | _____ | A | _____ | B | _____ | C | _____ | D | _____ | F |
14. Using the same scale again, what percent of teachers whom you have had at the various school levels would you give As, Bs, Cs, Ds and Fs?
- | | |
|----------------------------|--|
| Elementary Schools | % _____ A + % _____ B + % _____ C + % _____ D + % _____ F = 100% |
| Middle/Junior High Schools | % _____ A + % _____ B + % _____ C + % _____ D + % _____ F = 100% |
| High Schools | % _____ A + % _____ B + % _____ C + % _____ D + % _____ F = 100% |
15. As you reflect on your school experiences, how would you judge the academic rigor of your program?
- a. Elementary:
_____ should be more rigorous _____ acceptable as it is _____ should be less rigorous
- b. Middle/Junior High School:
_____ should be more rigorous _____ acceptable as it is _____ should be less rigorous
- c. High School:
1. English:
_____ should be more rigorous _____ acceptable as it is _____ should be less rigorous
2. Foreign Language:
_____ should be more rigorous _____ acceptable as it is _____ should be less rigorous
3. Mathematics:
_____ should be more rigorous _____ acceptable as it is _____ should be less rigorous
4. Science:
_____ should be more rigorous _____ acceptable as it is _____ should be less rigorous
5. Social Studies
_____ should be more rigorous _____ acceptable as it is _____ should be less rigorous
16. Estimate the quality of the following facilities and equipment available for student use at your high school.

	Excellent	Good	Fair	Poor	Not Applicable or Available to me
Library	_____	_____	_____	_____	_____
Science Laboratory(ies)	_____	_____	_____	_____	_____
Classrooms	_____	_____	_____	_____	_____
Band/Orchestra Room	_____	_____	_____	_____	_____
Choral Room	_____	_____	_____	_____	_____
Auditorium/Theater	_____	_____	_____	_____	_____
Vocational Laboratories/Classrooms	_____	_____	_____	_____	_____
Computers	_____	_____	_____	_____	_____

17. In some nations, students attend school as many as 240 days a year as compared to about 180 days in the United States. How would you feel about extending the school year by 30 days, making the school year about 210 days or 10 months?

 Favor

 Oppose

 Uncertain

18. What do you think are the biggest problems that the schools in your community face?

19. What do you think are the activities/programs that the schools in your community do the best?

20. If you were allowed to make only one recommendation for improving the schools, what would that recommendation be?

[illegible]

21. If there were one thing about your school that you would definitely not like to see changed, what would it be?

22. As you think about colleges and universities, please list in order of preference your first three choices where you would consider attending:

_____ 1st choice
_____ 2nd choice

_____ 3rd choice

23. Keeping in mind your first choice universities above that you would like to attend, please check all applicable items that would indicate why you want to go there.

_____ Guidance counselors' advice

____ Graduates go to top graduate schools

Teachers' advice

_____ Graduates get good jobs

Relatives' wishes

Low tuition

Friends' suggestions

 Promise of financial aid or scholarship

Religious affiliation

 Good academic reputation

____ Near home

 Good social life reputation

Size

Reputation in sports

Other (please list)

24. What factor(s) will determine which university you will actually attend?

Survey of 1999 Kansas High School Seniors

Who are National Merit Semifinalists

Page 4 of 4

25. Have you made a choice of a career? _____ Yes _____ No
 If "Yes," what is that choice? _____
 Indicate the level of certainty of your choice by circling the appropriate number on the following scale, where a "1" indicates that you are very certain and a "5" indicates that you are very uncertain. 1 2 3 4 5
26. After you graduate from college, where (which state) would you most prefer to work? _____
27. Have you been a participant in one of the Kansas Regents Honor Academics? _____ Yes _____ No
28. Respondent: _____ Male _____ Female
29. Respondent Date of Birth: _____
30. _____ White _____ African-American _____ Hispanic-American
 _____ Asian-American _____ American Indian _____ Other
31. High School:
 a. Size: _____ 1A _____ 2A _____ 3A _____ 4A _____ 5A _____ 6A
 b. _____ Public _____ Private/Parochial
32. Parents:
 a. Is your Father still living? _____ Yes _____ No
 b. Is your Mother still living? _____ Yes _____ No
 c. If both are still living, are they:
 _____ Still married to each other _____ Separated _____ Divorced
33. Father's occupation: _____
34. Mother's Occupation: _____
35. Indicate the highest level of education your parents have completed:
- | | <u>Mother</u> | <u>Father</u> |
|---|---------------|---------------|
| a. If less than a high school diploma, indicate grade level | _____ | _____ |
| b. High school graduate | _____ | _____ |
| c. If less than a college degree, indicate number of years in college | _____ | _____ |
| d. Associate (2 years) degree | _____ | _____ |
| e. Bachelor's (4 years) degree | _____ | _____ |
| f. Master's degree or higher | _____ | _____ |
| g. Other (please describe) _____ | _____ | _____ |
36. Do you have brothers and/or sisters?
 _____ Yes _____ No
 If "Yes," how many brothers? _____ How many sisters? _____
 If "Yes," where are you in the birth order? _____ Oldest _____ Middle _____ Youngest
37. Please estimate your family's income for 1998-1999:
 _____ under \$29,999 _____ \$30,000-\$49,999 _____ \$50,000-\$69,999
 _____ \$70,000-\$89,999 _____ \$90,000-\$109,999 _____ \$110,000 and over

Thank you for completing this questionnaire.

I. Introduction

A follow-up study was completed to determine the colleges and universities where the 1999 NMSFs planned to enroll in the fall of 1999. In addition, this study provides related data concerning the selected institutions: the frequency with which they have been selected, their locations, their types (i.e. public or private), and their sizes. The differences in patterns between female (F) and male (M) respondents also are reported. In closing, the number of 1999 NMSFs achieving National Merit Finalist standing also is reported.

The information for this follow-up study was provided by the official of the high schools where the NMSFs graduated. During the summer of 1999, 54 of the 73 NMSFs' high schools reported the names of the colleges/universities that their NMSFs had selected to attend, and if their NMSFs had been named Finalists. As a result, this report summarizes Finalist standings and college/university matriculation plans for 132 of the 166 NMSFs in the class of 1999. Specific institutions are not known for five of the NMSFs; one chose to stay for a fourth year of high school; and one chose to attend technical school. The high schools of the remaining 34 NMSFs did not respond.

In the initial study, 95 of the 166 NMSFs completed a questionnaire during the first semester of their senior year. The following question was included in the 37 item questionnaire:

As you think about colleges and universities, please list in order of preference your first three choices where you would consider attending.

Fifty-seven of the 95 responding NMSFs (60%) listed a Kansas institution as either a first (32 or 33.7%), second (23 or 24.2%) or third (27 or 28.4%) preference. Some of the 57 NMSFs listed more than one Kansas institution among their three preferences.

One assumption underlying the original study was that students' actual choices would be different from their stated preferences. For example, a student whose three preferences were listed as Harvard, Stanford, and Yale might enroll somewhere else. An additional assumption was that the percentage of Kansas NMSFs actually enrolling in Kansas' institutions would be greater than 34.3% (57 of 166) when follow-up data were collected. Both of these assumptions were influenced by responses to the earlier 1999 NMSF survey that revealed 73.7% (57 of 95) of the respondents reported financial considerations would determine the college or university they actually attend.

When the follow-up surveys were analyzed, the data showed that 23.6%—nearly one in four—of those who had expressed preferences actually enrolled in institutions that were not among their preferences. And, a total of at least 70 of 166 NMSFs (42.2%) enrolled in Kansas institutions, an increase from the 34.3% who had previously indicated Kansas colleges/universities among their preferences. This figure could, of course, be higher as the high schools of 34 NMSFs did not respond to the follow-up survey.

II. Findings

Responding high schools indicated 125 NMSFs chose to enroll at 48 different colleges and universities distributed across 24 states and the District of Columbia. Thirty-six institutions enrolled one NMSF; four enrolled two NMSFs, and eight enrolled three or more NMSFs (Table 1). The eight institutions enrolling three or more account for 81 (64.8%) NMSFs (Table 2).

Eight different Kansas institutions enrolled 70 NMSFs (42.2%), including five Regents universities: University of Kansas—42; Kansas State University—20; Fort Hays State University—3; Wichita State University—1; and Emporia State University—1 (Table 3). Forty-seven males chose Kansas institutions in contrast to 23 females.

A majority (61.6%) of the NMSFs chose public colleges or universities. Females chose private institutions (51.7%) more frequently than males (23.9%) (Table 4). Eight percent (8%) of the NMSFs (10% female and 6% male) chose institutions enrolling 2000 or fewer students, whereas 59% (45% female and 72% male) chose institutions enrolling more than 15,000 (Tables 5 and 6).

Ninety-five NMSFs responded to the survey; high schools reported enrollment data for 72 of these individuals. An analysis of college/university preferences for these 72 NMSFs with actual enrollment selections shows that 41.6% enrolled in their first choice schools, 18% in their second choice, and 16.6% in their third choice. Almost a fourth (23.6%) enrolled in colleges/universities that they did not list among their preferences (Table 7).

Finally, a NMSF must achieve Finalist status to be considered for a Merit Scholarship award. This process involves a detailed application package, endorsement and recommendation of the Semifinalist by the high school principal, presentation of a school record of course work, and confirmation of the student's earlier PSAT/NMSQT performance on the SAT I. Additional information collected includes a description of the Semifinalist's educational plans, school and community activities, and accomplishments inside and outside the classroom. Finalist standing was achieved by about 93% of NMSFs according to the National Merit Scholarship Corporation (NMSC) (Annual Report 1998-99).

The NMSC Annual Report 1998-99 shows that 163 of the 172 (94.8%) Kansas NMSFs were named Finalists. This is a higher percentage than shown by the data received from high school officials indicating that 95 of the 132 Kansas NMSFs achieved Finalist standing. One-hundred twenty-six of the 163 Finalists (77.3%) received a Merit Scholarship or Special Scholarship awards (NMSC 1998-99). Further, Kansas Finalists' ranked fourth out of the seven Big 12 states in receipt of NMSC scholarship awards: Oklahoma—89.2%; Texas—86.1%; Nebraska—84.9%; Kansas—77.3%; Missouri—68.8%; and Colorado—56.3%. Overall, Kansas NMSFs fared well in the National Merit Scholarship competition.

The table below shows sponsorship of Merit Scholarships in Kansas, the Kansas NMSFs that participated in the study, and the national Finalists data from the NMSC Annual Report 1998-99.

	Merit Scholarships Sponsored	Kansas NMSFs Enrolling	Finalists Nationally Enrolling
KSU	16	20	22
KU	84	42	101
Totals	100	62	123

Knowing how many Kansas Finalists enrolled in Kansas' institutions is beyond the scope of this study. However, it is clear that 62% of Kansas NMSFs choose to enroll in public institutions—54% in Kansas public institutions—compared to 37% of all Finalists nationally (Table 5). Why Kansas NMSFs prefer in-state public institutions is a question for future study.

Reproduction Release

(Specific Document)

I. DOCUMENT IDENTIFICATION:

1999	
Title: Kansas National Merit Semifinalists: A Profile and College/University Enrollment Choices	
Author(s): Billie D.A. Archer, Jerry D. Bailey	
Corporate Source: Jones Institute for Educational Excellence, Emporia State Univ.	Publication Date: January 2000

II. REPRODUCTION RELEASE:

In order to disseminate as widely as possible timely and significant materials of interest to the educational community, documents announced in the monthly abstract journal of the ERIC system, Resources in Education (RIE), are usually made available to users in microfiche, reproduced paper copy, and electronic media, and sold through the ERIC Document Reproduction Service (EDRS). Credit is given to the source of each document, and, if reproduction release is granted, one of the following notices is affixed to the document.

If permission is granted to reproduce and disseminate the identified document, please CHECK ONE of the following three options and sign in the indicated space following.

The sample sticker shown below will be affixed to all Level 1 documents	The sample sticker shown below will be affixed to all Level 2A documents	The sample sticker shown below will be affixed to all Level 2B documents
Level 1	Level 2A	Level 2B
Check here for Level 1 release, permitting reproduction and dissemination in microfiche or other ERIC archival media (e.g. electronic) and paper copy.	Check here for Level 2A release, permitting reproduction and dissemination in microfiche and in electronic media for ERIC archival collection subscribers only	Check here for Level 2B release, permitting reproduction and dissemination in microfiche only
<p>Documents will be processed as indicated provided reproduction quality permits. If permission to reproduce is granted, but no box is checked, documents will be processed at Level 1.</p>		

I hereby grant to the Educational Resources Information Center (ERIC) nonexclusive permission to reproduce and disseminate this document as indicated above. Reproduction from the ERIC microfiche, or electronic media by persons other than ERIC employees and its system contractors requires permission from the copyright holder. Exception is made for non-profit reproduction by libraries and other service agencies to satisfy information needs of educators in response to discrete inquiries.

Organization/Address: Jones Institute for Educational Excellence The Teachers College--Box 4036 Emporia State University Emporia, Kansas 66801-5087	Telephone: 316-341-5372	Fax: 316-341-5785
	E-mail Address: warrene1@emporia.edu	Date: 5/19/00

III. DOCUMENT AVAILABILITY INFORMATION (FROM NON-ERIC SOURCE):

If permission to reproduce is not granted to ERIC, or, if you wish ERIC to cite the availability of the document from another source, please provide the following information regarding the availability of the document. (ERIC will not announce a document unless it is publicly available, and a dependable source can be specified. Contributors should also be aware that ERIC selection criteria are significantly more stringent for documents that cannot be made available through EDRS.)
